**Dr Laura Benedetti**  
MBBS, FRACP  
CONSULTANT NEUROLOGIST

**Full Name:** Doris WALLACE **Gender:** Female  
**Patient ID:** 26-0917 **Date of Birth:** 19/12/1948

**Visit Date:** 11/09/2026 10:40 AM  
**Examining Physician:** Laura Benedetti  
**Referring Physician:** Dr Herman Lau  
**Patient History:** ?Carpal tunnel syndrome R>L

## Sensory Nerve Conduction

| Nerve / Sites   | Rec. Site | Onset Lat ms | Amp. $\mu$ V | Distance mm | Velocity m/s |
|-----------------|-----------|--------------|--------------|-------------|--------------|
| R Median Dig II | Wrist     | 4.1          | 6.2          | 135         | 33           |
| L Median Dig II | Wrist     | 3.4          | 11.8         | 135         | 40           |
| R Ulnar Dig V   | Wrist     | 2.5          | 9.1          | 120         | 48           |

## Motor Nerve Conduction

| Nerve / Sites    | Muscle | Latency ms | Amplitude mV | Velocity m/s |
|------------------|--------|------------|--------------|--------------|
| R Median - Wrist | APB    | 5.8        | 5.1          |              |
| R Median - Elbow | APB    | 10.2       | 4.8          | 50           |
| L Median - Wrist | APB    | 4.2        | 8.4          |              |

## Report

Right median sensory and motor distal latencies are prolonged with reduced sensory amplitude. Left median studies show mild slowing across the wrist. Ulnar studies are normal.

## Comment

Today's nerve conduction studies show **moderate right and mild left median neuropathy at the wrist**, consistent with bilateral carpal tunnel syndrome.

Dr Laura Benedetti
