URGENT

Dear Dr Hartley,

RE: Mr Harold James Pemberton

DOB: 12/04/1947 Medicare: 4182 55390 2 [REDACTED]

1

Thank you for seeing Mr Harold James Pemberton, age 78 years.

Presenting Problem: He has developed joint pain since early December. The pain was on hips, shoulders, elbows and knees mostly and small joints of hands and feet were not affected. Blood test showed high CRP, neutrophilia and monocytosis.

I have started 15mg Prednisone and he had a substantial relief. He has started feeling joint pain and stiffness returning. I think he has a seronegative type of arthritis.

Please find further patient details in the attachment.

I would value your review and advice regarding further management.

Yours sincerely,

Sofia Almeida
