Bondi Junction NSW 2022

Dear Sarah,

RE: PETROVIC, Aleksandar — DOB 04/11/1971 — Medicare 5172839405 / 2

I am writing to formally discharge Aleksandar from my rheumatology clinic, with thanks for the original referral in 2023.

As you know, Aleksandar was initially referred for investigation of polyarthralgia. Following work-up his symptoms were attributed to a non-inflammatory mechanical aetiology rather than seronegative inflammatory arthritis. We have monitored him for two years with serial inflammatory markers all within normal range (most recently ESR 6, CRP <3), and clinically he has remained well on physiotherapy alone with no need for DMARD therapy.

I am therefore discharging him back to your care. There is no ongoing need for specialist rheumatology input. Should his symptoms change in character — particularly if he develops genuine joint swelling, prolonged morning stiffness, or systemic features — I would be very happy to see him again on re-referral.

Thank you again for the original referral and the ongoing primary care.

Kind regards,

Dr Adam Maundrell
