Dear Mark,

RE: WHITAKER, Helen — DOB 22/08/1957 — Medicare 2298765432 / 1

Thank you for sending Helen back for her three-month rheumatoid arthritis review on 10 May 2026. I am writing to update you on her progress since we adjusted her treatment in February.

Helen has tolerated the increase in methotrexate to 20mg weekly very well, with no nausea and stable liver enzymes (ALT 28, AST 24). Her morning stiffness has reduced from 90 minutes to about 20 minutes, and her DAS28 has dropped from 4.6 to 2.9 — a clinical response we are both pleased with. Hand swelling and tenderness in the MCP joints have largely resolved.

I have asked her to continue methotrexate 20mg weekly, folic acid 5mg daily (excluding the methotrexate day), and to maintain her existing low-dose prednisolone wean. She will continue regular bloods through your rooms every six weeks.

I will see her again in three months. There is no need for any further action at your end — this letter is simply to keep you informed of her ongoing care.

Kind regards,

Dr Irwin Lim
