Dear Rheumatologist,
BJC Health
Parramatta NSW 2150

re. Mrs Jennifer O'Connor — DOB 23/04/1968 — Medicare 4198273645 / 1

Address: 47 Beattie Street, Balmain NSW 2041

Phone: 0419 887 332

I am referring Mrs O'Connor for assessment and management of a six-month history of symmetrical polyarthralgia affecting the small joints of her hands, wrists, and feet, with associated morning stiffness lasting up to two hours.

Her symptoms have progressed despite trial of regular paracetamol and a short course of celecoxib. There is now visible synovitis at the MCPs bilaterally and tenderness at the MTPs. She has lost approximately 4 kg of weight unintentionally over the same period and reports significant fatigue.

Recent investigations are attached for your reference, including a positive rheumatoid factor and elevated anti-CCP, along with raised inflammatory markers. Hand X-rays are also enclosed.

I would be grateful for your assessment, advice on diagnosis, and consideration of DMARD therapy. Please contact me if you require any further information.

Yours sincerely,

Dr Mary Sutherland
General Practitioner
Provider No. 0512345A

Referrer: Dr Mary Sutherland, Rozelle Family Medical Centre

X-Ray Both Hands — PA and Oblique Views

Technique: Bilateral PA and oblique radiographs of the hands and wrists.

Findings: Symmetrical soft tissue swelling at the MCP joints bilaterally. Periarticular osteopenia is noted at the 2nd and 3rd MCPs on the right. There is an early erosion at the radial aspect of the right 2nd MCP head, measuring approximately 1.5mm. No joint space narrowing yet. No subluxation. Bony alignment is preserved. The carpal bones appear unremarkable.

Impression: Findings consistent with early erosive inflammatory arthropathy. Symmetrical distribution and MCP involvement support a diagnosis of rheumatoid arthritis. Recommend clinical correlation and rheumatology review.

Reported by: Dr Anthony Reeves, Radiologist (Provider 0000002R)
