

BJC PDF-TO-DIRECTORY WORKFLOW

Reference documentation for the **PDF-to-Directory** automation — the sister system to PDF-to-HL7. Both serve BJC Health's goal of eliminating manual PDF filing into the Genie patient management system.

SYSTEM OVERVIEW

	PDF-to-Directory	PDF-to-HL7
Scope	Fixed format consent forms only	Referrals, consent forms, GP letters, generic
Platform	Power Automate Desktop (Windows)	Next.js on AWS Amplify
AI	OCR + Python regex	Bedrock Claude Sonnet (vision)
Output	Renamed PDF file on network folder	HL7 v2.4 message (download)
Genie import	Auto-linked via filename convention	Imported via HL7 message
Trigger	Task Scheduler (every 15 min)	Manual upload via web UI
Data flow	Email inbox -> network folder	Browser upload -> HL7 download

ARCHITECTURE

FILENAME CONVENTION

{LastName};{FirstName};{DDMMYYYY};PD.pdf

Component	Example	Notes
LastName	Pyne	Extracted from "Last Name *" field
FirstName	Nicole	Extracted from "First Name *" field
DDMMYYYY	04061997	DOB with slashes removed
PD	PD	Source mailbox identifier

Full example: Pyne;Nicole;04061997;PD.pdf

Semicolons are mandatory — this is the format Genie expects for auto-linking files to patient records.

EXTRACTION LOGIC (ROBIN/PYTHON)

The PAD flow uses built-in PDF text extraction followed by Python 3 regex parsing:

```
import re

def grab(pattern, s):
    m = re.search(pattern, s, re.IGNORECASE)
    return m.group(1).strip() if m else ""

first = grab(r"First Name\s*\*\s*\r?\n\s*([^\r\n]+)", text)
last = grab(r"Last Name\s*\*\s*\r?\n\s*([^\r\n]+)", text)
dob = grab(r"(?:Preferred Name\s+)?Date of Birth\s*\*\s*\r?\n\s*([0-9]{1,2}/[0-9]{1,2})")

dob_safe = dob.replace("/", "")
filename = "{};{};{};PD.pdf".format(last, first, dob_safe) if (first and last and dob_safe)
```

The regex matches the BJC Health Patient Information and Consent Form layout where field labels are followed by values on the next line.

EMAIL STATUS

Location	Meaning	Staff Action
Inbox/Linked folder	Processed successfully	None — file is in network folder
Inbox (no move)	Failed or pending	Manual review required

ERROR HANDLING

Scenario	Behaviour
Extraction returns empty (no name/DOB)	Skip attachment, email stays in inbox
Network folder unavailable	Temp file saved locally, retried next run
Leftover temp file from crash	Auto-deleted on next startup
Scanned/image-only PDF	Text extraction returns empty, skipped
Task Scheduler missed run (server restart)	Startup trigger resumes within ~10 min

INFRASTRUCTURE

Component	Detail
Host	Windows server (<code>WSAMZN-TA1F82A8</code>)
Service account	<code>CORP\demonstration</code> / <code>PAuto@bjchealth.com.au</code>
Mailbox	<code>PD@bjchealth.com.au</code> (shared)
Network folder	<code>\\192.168.47.10\PracticeData\Genie Scans\PD</code>
Temp folder	<code>C:\SMEC AI\</code> (local)
PAD connection	Office 365 Outlook (<code>pdftodirectory-09a24</code>)
Schedule	Every 15 min during business hours + on startup
Registry fix	<code>DisableExternalFlowConfirmationDialog = 1</code> (HKCU)

Licensing

Component	Licence
Power Automate Desktop	Free with Windows
Power Automate Premium	Required (assigned to service account)
AI Builder	Not required (uses built-in PAD text extraction)

RELIABILITY IMPROVEMENTS (FEB 2026)

Five fixes applied after the 19 Feb 2026 outage:

1. **Temp file moved to local drive** — avoids network lock issues
2. **Cleanup on startup** — removes leftover temp files before processing
3. **Empty result protection** — skips unreadable PDFs instead of failing
4. **Unattended execution fix** — registry key bypasses confirmation dialog
5. **Server restart recovery** — startup trigger catches up on missed runs

RELATIONSHIP TO PDF-TO-HL7

Both systems target the same goal — getting patient documents into Genie — but via different paths:

PDF-to-Directory handles the simple, high-volume case:

- Consent forms arrive by email automatically
- Fixed form layout = regex extraction is reliable
- Output is a renamed PDF file that Genie auto-imports from a watched folder

PDF-to-HL7 handles the complex, varied case:

- Referral letters, GP letters, and other clinical documents
- Variable layouts require AI vision (Bedrock Claude) for extraction
- Output is an HL7 v2.4 message with embedded PDF, sender/addressee metadata, and Genie routing fields
- Supports document classification, CC addressee resolution, and provider number routing

The two systems are complementary — PDF-to-Directory is fully automated (no human in the loop), while PDF-to-HL7 is staff-assisted (upload via web UI, review extracted data, download HL7).

STAKEHOLDERS

Name	Role
Sean O'Reilly	Technical lead (SMEC AI)
Amy Johnson	Operations Manager (BJC Health)
Nicole Pyne	Reception (BJC Health)
Errol Lim	Managing Director (BJC Health)

SOURCE REPOSITORY

[bjc-pdf-to-directory](#) — contains the PAD Robin flow scripts, production implementation guide, and deployment documentation.

Last updated from source docs: 24 February 2026

A handwritten signature in black ink that reads "Sean O'Reilly". The script is fluid and cursive, with the first letters of each word being capitalized and prominent.

Sean O'Reilly

Full Stack Engineer, SMEC AI
