

PDF-TO-HL7 API PRICING COMPARABLES — MARKET RESEARCH

Generated: 2026-04-01 | Sources: 25+ | For: BJC Health pricing context

EXECUTIVE SUMMARY

Pricing for services comparable to “PDF upload -> AI extraction -> structured output” spans a wide range depending on whether you look at raw infrastructure (cloud OCR APIs at fractions of a cent per page), document AI platforms (\$0.01-0.66 per document), or healthcare-specific integration platforms (\$0.08+ per transaction with \$35K+ annual platform fees). Our BJC Health service sits in a unique intersection: healthcare-domain AI extraction + HL7 message generation + Genie-specific formatting.

Key finding: There is no direct public comparable for a “PDF-to-HL7 conversion API” sold as a SaaS product. The closest comparables are either (a) document AI extraction APIs that output JSON (not HL7), or (b) healthcare integration platforms that route existing HL7 messages but don’t create them from PDFs. Our service combines both.

1. HEALTHCARE HL7/FHIR INTEGRATION PLATFORMS

These companies route, translate, and manage healthcare messages between systems. They charge for message throughput, not document extraction.

Company	What They Do	Pricing Model	Per-Unit Cost
Redox	HL7/FHIR API integration platform (EHR connectivity)	Platform fee + per-API-call	~\$0.08/API call; ~\$35K-45K/yr platform fee + \$7-12K per EHR connection
Google Cloud Healthcare API	FHIR/HL7v2/DICOM data store and routing	Per-operation	~\$0.01/1,000 operations (standard); \$0.99/100K for advanced ops; 25K free/mo
Rhapsody / Corepoint	Integration engine (on-prem/cloud)	Annual license per server, flat fee (no per-message)	Enterprise pricing, not public; flat annual license per communication point
Mirth Connect (NextGen)	Integration engine (now commercial-only from v4.6)	Annual license per server, tiered	Flat annual license, no per-interface fees; pricing not public
1upHealth	Patient data API (FHIR)	Per-API-call (fractions of a cent)	Custom pricing; described as "fractions of a cent per API call"
Particle Health	Patient record retrieval API	Per-query	Custom pricing; not publicly disclosed
Metriport	Open-source FHIR API (300M+ patients)	Per-patient or per-query	Custom pricing; not publicly disclosed

Takeaway: Healthcare integration platforms are either (a) enterprise-priced at \$35K+/year with per-transaction fees around \$0.05-0.10, or (b) message-routing infrastructure at fractions of a cent per operation. None of them do what our service does (extract from PDF + generate HL7).

2. DOCUMENT AI / PDF EXTRACTION APIS (CLOUD PROVIDERS)

These are the raw OCR/extraction building blocks. They extract text or structured fields from documents but output JSON, not HL7.

Company	Service	Per-Page Cost	Notes
Google Document AI	Enterprise OCR	\$0.0015/page (first 5M); \$0.0006/page (5M+)	Basic text extraction
Google Document AI	Form Parser / Custom Extractors	\$0.02-0.03/page	Structured field extraction
Google Document AI	Layout Parser	\$0.01/page	Document layout understanding
AWS Textract	Detect Document Text (OCR)	\$0.0015/page (first 1M); \$0.0006/page (1M+)	Basic text extraction
AWS Textract	Analyze Document (forms/tables)	\$0.065/page (first 1M); \$0.05/page (1M+)	Structured extraction
AWS Textract	Custom Queries	\$0.025/page	Natural language queries against documents
Azure Document Intelligence	Read/OCR	\$0.0015/page	Basic text extraction
Azure Document Intelligence	General Document model	~\$0.0125/page	Pre-built structured extraction
Azure Document Intelligence	Invoice/Receipt models	\$0.001/invoice	Specialized document types

Takeaway: Raw cloud OCR is extremely cheap (\$0.001-0.003/page). Structured extraction with field mapping costs 10-50x more (\$0.01-0.065/page). These are building blocks, not end-to-end solutions.

3. SPECIALIZED DOCUMENT AI PLATFORMS (STARTUPS/SAAS)

These offer higher-level document extraction with better developer experience, pre-built models, and more intelligence than raw OCR APIs.

Company	What They Do	Pricing Model	Per-Unit Cost
Mindee	Document parsing API (invoices, receipts, IDs)	Per-page	Free: 25 pages/mo; then \$0.05-0.10/page; custom at volume
Nanonets	AI document processing + workflow	Per-page / per-block-run	~\$0.30/page (Starter); Pro at \$999/mo per workflow
Reducto	LLM-optimized document parser	Per-page (credits)	\$0.015/page for parsing
LandingAI	Agentic document extraction	Per-page	\$0.03/page
Sensible	Developer document extraction API	Per-document (not per-page)	\$499/mo for 750 docs = ~\$0.66/doc; 100 free/mo
Docsumo	Intelligent document processing	Per-page	\$0.30/page (Growth); from \$25/mo for low volume
Rossum	AI document processing for transactional workflows	Annual subscription + per-transaction	From \$18K/yr (~\$1,500/mo); \$0.02-0.30/page depending on volume
V7 (V7 Labs)	AI document extraction platform	Custom quotes	Not public; requires consultation

Takeaway: Purpose-built document AI platforms charge \$0.015-0.66 per document/page, with the median around \$0.05-0.30 per document. These extract structured data but none produce HL7 output.

4. LLM-BASED DOCUMENT EXTRACTION (OUR APPROACH)

Our service uses Bedrock Claude Sonnet for vision-based extraction. Here's what that costs us and what the market charges for similar LLM-powered extraction.

Our Cost of Goods (Bedrock Claude Sonnet 4.6)

Factor	Value
Input token pricing	\$3.00 / 1M tokens
Output token pricing	\$15.00 / 1M tokens
Tokens per PDF page	~1,500-3,000 (input)
Output tokens per extraction	~500-1,500
Cost per 1-page PDF	~\$0.005-0.015 (input) + ~\$0.008-0.023 (output) = ~\$0.013-0.038
Cost per typical 2-3 page referral	~\$0.03-0.10
Batch inference discount	50% off on-demand rates

Market Pricing for LLM-Based Extraction

Approach	Cost Per Document	Notes
Direct LLM API (Claude/GPT)	\$0.20-1.00+ per document	General-purpose, no pre-built extraction logic
LLM + structured extraction platform	\$0.05-0.30 per document	Reducto, LandingAI, Nanonets
Our Bedrock cost (COGS)	~\$0.03-0.10 per referral	Vision extraction + classification
Our total infra cost (hosting + AI)	~\$0.06-0.12 per referral	Including Amplify compute

5. SUMMARY COMPARISON TABLE

Category	Company/Approach	Per-Document Cost	What You Get
Raw OCR	Google/AWS/Azure OCR	\$0.001-0.003	Plain text, no structure
Structured extraction	AWS Textract Analyze	\$0.05-0.065	Forms/tables as JSON
Structured extraction	Google Doc AI Custom	\$0.02-0.03	Custom fields as JSON
Document AI platform	Mindee	\$0.05-0.10	Pre-built models, JSON output
Document AI platform	Reducto	\$0.015	LLM-optimized parsing
Document AI platform	Sensible	~\$0.66	Per-document, any type
Document AI platform	Nanonets	\$0.30	AI extraction + workflows
Document AI platform	Docsumo	\$0.30	IDP with validation
LLM direct	Claude/GPT raw	\$0.20-1.00+	Unstructured, flexible
Healthcare integration	Redox	\$0.08/call + \$35K+/yr	HL7/FHIR routing (not creation)
Healthcare integration	Google Healthcare API	~\$0.00001/op	FHIR store/routing only
Our COGS	Bedrock + Amplify	~\$0.06-0.12	Full PDF-to-HL7 with AI extraction

6. WHAT THIS MEANS FOR PRICING OUR SERVICE

As an API product (if we ever sell per-transaction)

Based on the market data, reasonable per-transaction pricing for a “PDF in, HL7 out” API would be:

Pricing Tier	Per-Conversion Price	Rationale
Budget/commodity	\$0.25-0.50	Competes with document AI platforms; thin margin
Mid-market	\$0.50-1.00	Healthcare premium over generic doc AI; reflects domain expertise
Premium/healthcare	\$1.00-2.50	Comparable to Redox per-transaction; HL7 compliance + AI extraction
Enterprise	\$2.00-5.00+	Custom HL7 profiles, guaranteed SLAs, compliance certifications

Healthcare premium justification

- Generic document AI: \$0.05-0.30/doc (no healthcare knowledge)
- Healthcare integration: \$0.08/call + platform fees (no document extraction)
- Our service combines both: AI extraction + healthcare-specific output
- Healthcare SaaS commands a 15-30% premium over horizontal competitors
- Compliance, audit trails, and Australian data residency add further value

For BJC Health specifically

At ~\$0.06-0.12/referral COGS and \$330/mo all-in running costs:

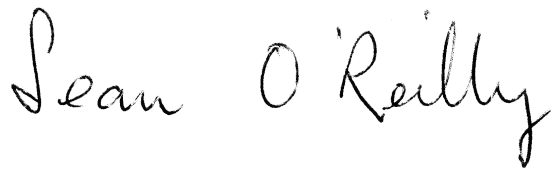

- At 500 referrals/month: effective cost is ~\$0.66/referral (including retainer)
- At 700 referrals/month: effective cost is ~\$0.47/referral
- This compares favourably to \$1.50-2.50/referral in manual staff time
- And well below what any healthcare integration platform would charge for equivalent functionality
