Dear Dr Lau,

Re: Mr Benjamin Whitfield — DOB 17/09/1972

31 Glenmore Place, Pitt Town NSW 2756 · Phone 0421 668 933
Medicare 4422 11907 8 · Reference 2

Thank you for seeing Mr Whitfield, who is 53 years of age, for ongoing review and management of his chronic spontaneous urticaria and concurrent moderate persistent asthma. He has had a difficult three months with daily wheal breakthrough on his current omalizumab and we would value your re-assessment.

He continues to work full time as a wholesale produce manager — frequent early starts, cold loading docks, and recent shifts to refrigerated handling roles seem to coincide with worse symptom days. I have asked him to keep a simple flare diary which he can bring to his appointment.

PAST MEDICAL HISTORY

2020 Chronic spontaneous urticaria — daily wheals on rest days, worse with cold air

17/05/2018 Moderate persistent asthma — well controlled on combination ICS/LABA until recent flare

2015 Allergic rhinitis (perennial)

09/11/2012 Atopic dermatitis (childhood onset, mostly quiescent)

2009 GORD — on PPI as needed

2003 Right shoulder rotator cuff repair (work-related)

CURRENT MEDICATIONS

Medication	Dose	Frequency	Started
Omalizumab (Xolair)	300 mg SC	monthly	2023
Fexofenadine	180 mg	BD (up-dosed)	2020
Cetirizine	10 mg	nocte (added recently)	Jan 2026
Salmeterol/Fluticasone (Seretide)	250 mcg	1 puff BD	2018
Salbutamol	100 mcg	PRN	2018

Medication	Dose	Frequency	Started
Mometasone nasal spray	50 mcg	1 spray each nostril daily	2015
Pantoprazole	40 mg	daily PRN	2009

ALLERGIES

NSAIDs (urticaria flare). No food allergies confirmed; mild oral allergy to stone fruit.

SOCIAL HISTORY

Lives with his wife Sarah and one teenage daughter. Non-smoker (gave up in 2014). Occasional alcohol on weekends. Active outdoor lifestyle — bushwalks most weekends — which has been curtailed by the recent flare.

He would benefit greatly from your input on whether the omalizumab dose warrants escalation, whether a trial of cyclosporine is appropriate, and whether the recent asthma deterioration is contributing to his urticaria burden. He is happy to travel to Parramatta and any appointment slot will work for him.

Many thanks for your ongoing care of Mr Whitfield, who is a lovely and very compliant patient.

Yours sincerely,

Dr Catherine Whittaker
