Dear Dr Lim,

Re: Mrs Patricia Chen — DOB 04/03/1958
42 Bonview Terrace, Coorparoo QLD 4151 · Phone 0413 882 401
Medicare 2954 88123 4 · Reference 1

Thank you for seeing Mrs Chen, who is 68 years of age, for follow-up and ongoing review and management as needed in relation to her seropositive rheumatoid arthritis with secondary osteoarthritic change.

She has been generally doing well on her current methotrexate regimen, although she reports a flare in her right knee and base-of-thumb joints over the past four to six weeks. She is finding stairs increasingly painful and has reduced her water walking from three sessions per week to one. I have suggested re-imaging the right knee but would value your opinion before referring her for that.

PAST MEDICAL HISTORY

2017	Seropositive rheumatoid arthritis (anti-CCP positive, ESR persistently elevated)
12/03/2014	Right total knee replacement — uncomplicated
2011	Hypertension — well controlled
21/06/2008	Hypothyroidism (Hashimoto's)
2005	Bilateral cataract extractions
1996	Total abdominal hysterectomy for fibroids

CURRENT MEDICATIONS

Medication	Dose	Frequency	Started
Methotrexate	20 mg	weekly	2019
Folic acid	5 mg	weekly (day after MTX)	2019
Hydroxychloroquine	200 mg	BD	2021
Prednisone	5 mg	mane (taper as tolerated)	Feb 2026
Telmisartan	40 mg	daily	2011
Levothyroxine	75 mcg	daily	2008

Medication	Dose	Frequency	Started
Vitamin D3	1000 IU	daily	2014

ALLERGIES

Penicillin — rash. No food or environmental allergies.

SOCIAL HISTORY

Lives independently with her husband Phillip. Two adult children. Non-smoker. Drinks rarely (one glass of wine on social occasions). She remains active in her local community garden but the joint pain is starting to limit this.

Mrs Chen would be very grateful for your input on whether her recent flare warrants a change to her DMARD regimen, and whether further imaging of her right knee would be useful given the prosthesis. She is happy to come up to Sydney for review whenever you can fit her in.

Many thanks for your continued care of this lovely patient.

Yours sincerely,

Dr Adrian Mortlock
